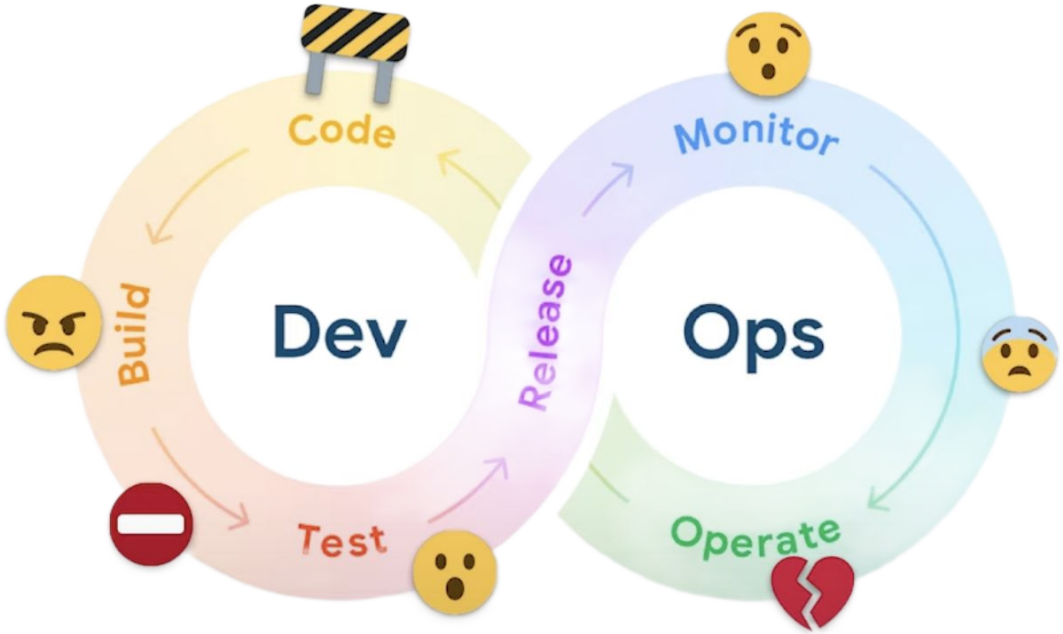
Why Build Apps with AI? Why Not?



Why Build Apps with AI? Why Not?

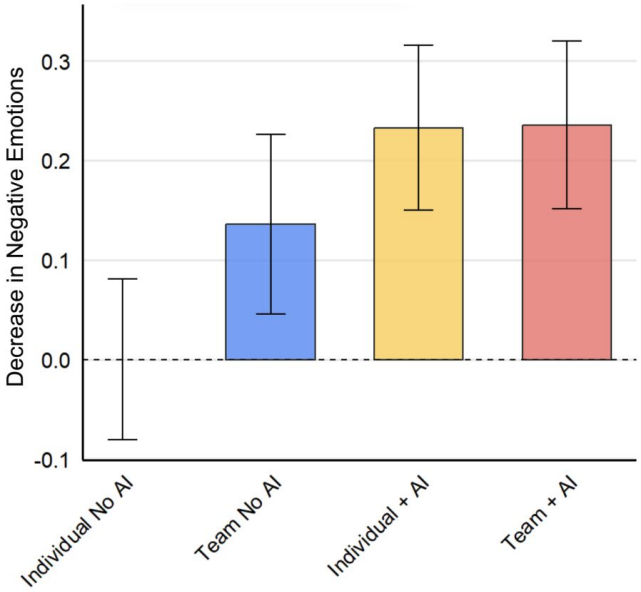
Developer uses AI-assistive tools to **write code more efficiently**

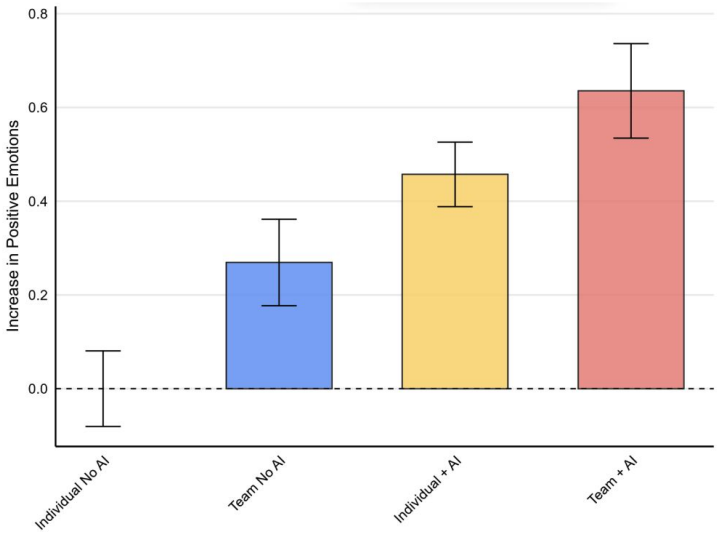
Developer **collaborates with AI** to design and build applications with **supervision of codebase and architecture**

Developer **sets goals for AI** to create applications with **little to no supervision of codebase or architecture**

By 2028, 75% of enterprise software engineers will use AI code assistants (Gartner, April 2024)

Why Build Apps with AI? Why Not?





Dell'Acqua, Fabrizio, Charles Ayoubi, Hila Lifshitz, Raffaella Sadun, Ethan Mollick, Lilach Mollick, Yi Han, Jeff Goldman, Hari Nair, Stew Taub, and Karim R. Lakhani. "The Cybernetic Teammate: A Field Experiment on Generative AI Reshaping Teamwork and Expertise." Harvard Business School Working Paper, No. 25-043, March 2025.

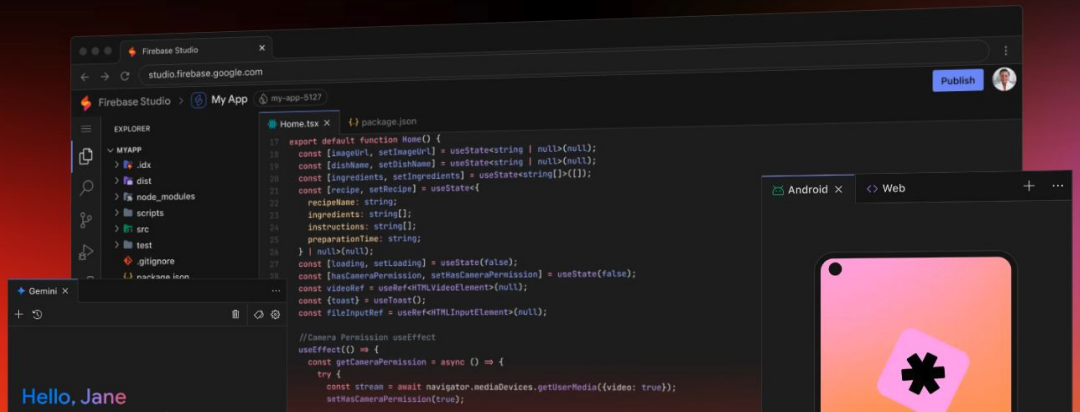
Why Build Apps with AI? Why Not?

“Today, more than a quarter of all new code at Google is generated by AI, then reviewed and accepted by engineers. **This helps our engineers do more and move faster.**”

Sundar Pichai, CEO Google
Google I/O 2025

Firebase Studio is an integrated and extensible agentic workspace to build, run and manage web apps, cross-platform mobile apps, backend services and more.

Kirupa Chinnathambi, Product Manager, Firebase Studio



Iterated with developer feedback

At Google I/O 24

At Google I/O 25

Web-based

Your workspace is a URL, installable as a PWA.

Deep Google Integrations

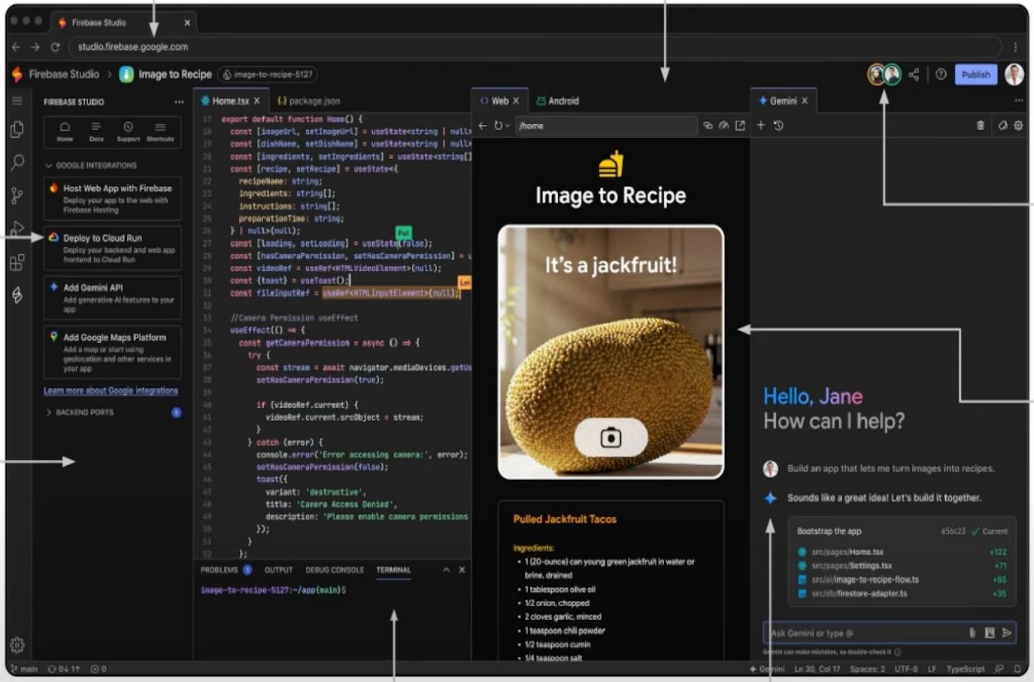
Streamline app dev workflows.

Preconfigured Environments

Start from common starting points or customize your own.

Full cloud VM

Supports most toolchains.



Built on VS Code

World-class code editing.

Designed for collaboration

Workspace sharing available with more features planned.

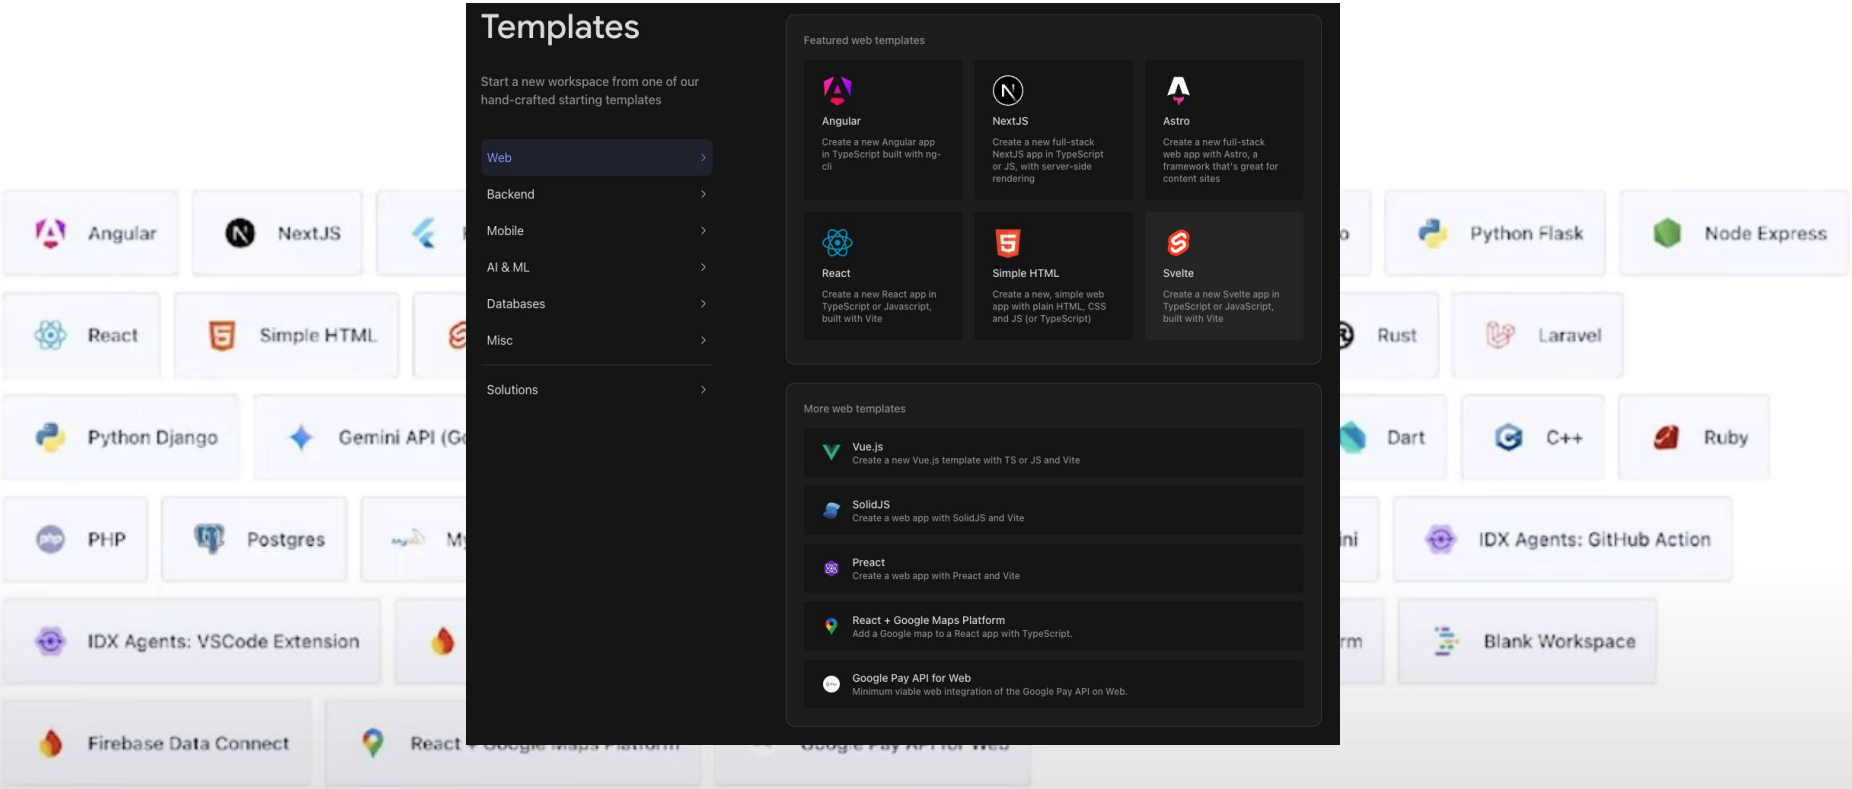
Live preview

Real device, emulator, or hosted IFRAME.

AI Assistance

Across code, test, debugging, etc.

Frontend, backend, mobile and more



Let’s build…

Get started with Firebase Studio

Things to consider

- Firebase Studio is still in its early preview stage, so some instability is expected.
- When exporting existing mobile projects, be aware that:
  - The simulator might be slow or unsupported.
  - Code syncing and builds can take significantly longer than usual.
  - A reliable internet connection is crucial unstable networks (e.g., café Wi-Fi) may disrupt key processes.
- The generated code may contain minor issues like broken strings or missing parameters.
- And remember, AI isn’t always as smart as you are!

Thank you!
